Surgical Rehabilitation of the Upper Limb in Tetraplegia, 1e

by Caroline LeClercq MD

series indicate that upper limb surgery has a definite place in rehabilitation of the upper limb. However, they tend to constrain the tetraplegic patient considerably. After the biceps-to-triceps surgery the patient’s arm is immobilized for the entire regimen, but can be treated as an outpatient after 1–4 weeks. Upper-limb surgery in tetraplegia - Wikipedia Surgical Rehabilitation of the Upper Limb in Tetraplegia Vincent R.
